Miscellaneous

That's all

Dirk Deimeke (that's me)

- ▶ Married, two dogs
- ▶ Born in Wanne-Eickel
- ▶ Living in Grüt (2008 emigrated to Switzerland)
- ▶ Senior Unix Systems Administrator in Zürich
- ▶ More <http://d5e.org/>

Dirk Deimeke (Ubuntu)

- ▶ President of German Ubuntu association [ubuntu Deutschland e. V.](#)
- ▶ Official point of contact for the [German LoCo-Team](#)
- ▶ Member of [Swiss LoCo-Team](#)
- ▶ Ubuntu Member
- ▶ More <http://d5e.org/ubuntu> (German) or <https://wiki.ubuntu.com/DirkDeimeke> (English)

Dirk Deimeke (Taskwarrior)

- ▶ I first saw Taskwarrior at Ubucon 2009 in a lightning talk of [Federico Hernandez](#), one of the core developpers.
- ▶ Started to use it in the beginning of 2010.
- ▶ Still enthusiastic about it! ;-)
- ▶ In the middle of 2010 I joined the [Taskwarrior Core Team](#)
- ▶ I like working in an international team (Watertown (Massachusetts, USA), Gothenburg (West Gothland, Sweden), Braunschweig, (Lower Saxony, Germany), Richmond (Virginia, USA), Bonn (North Rhine-Westphalia, Germany), Toronto (Ontario, Canada), Gruet (Zurich, Switzerland))
- ▶ <http://taskwarrior.org/>
- ▶ <http://d5e.org/taskwarrior> (German) own blog-articles about Taskwarrior

About this session

- ▶ **What is this all about?**

This is about Taskwarrior, an efficient tool for task management. Techniques for time management are not part of this session.

- ▶ **Why are the slides in English?**

Taskwarrior is an international project.

- ▶ **Why do you use the beta-Version?**

With Taskwarrior 2.0.0 a new syntax will be introduced.

Attention!

- ▶ This workshop is not a lecture, I want to do this together with you.
- ▶ Ask your questions if you have some!

Reasons for Taskwarrior

Taskwarrior

- ▶ is easy to learn.
- ▶ grows along with the work.
- ▶ is unbelievably powerful.
- ▶ is very fast.
- ▶ is easily extensible.
- ▶ is platform independent:
 - ▶ Most flavours of Unix and Linux, including Mac OS X and Ubuntu (PPA exists)
 - ▶ Windows with Cygwin
 - ▶ via SSH from my mobile
 - ▶ <http://taskwarrior.org/w/Platforms>
- ▶ is actively developed.
- ▶ can be influenced by users (feature requests).
- ▶ has excellent and very friendly support.

Installation with package management

All download-addresses

<http://taskwarrior.org/download>

Since Maverick Meerkat in Universe

(Unfortunately version is behind recent)

```
$ sudo apt-get install task
```

There is a PPA with the most recent version

<https://launchpad.net/~ultrafredde/+archive/ppa>

```
$ sudo add-apt-repository ppa:ultrafredde/ppa
```

```
$ sudo apt-get update
```

```
$ sudo apt-get install task
```

Installation from source

The Meta-Package `build-essential` and `cmake` are all you need to compile.

```
$ sudo apt-get install build-essential cmake
```

Download of recent version

```
$ curl -O http://www.taskwarrior.org/download/task-2.0.0.beta3.tar.gz  
$ # or wget http://www.taskwarrior.org/download/task-2.0.0.beta3.tar.gz
```

Untar and compile

```
$ tar task-2.0.0.beta3.tar.gz  
$ cd task-2.0.0.beta3  
$ cmake .  
$ make  
$ sudo make install
```

The last command installs Taskwarrior to `/usr/local`.

Installation from source with target directory

If you don't have root permissions or in case you want to use other directories, this is possible as well.

(No speciality of Taskwarrior).

```
$ cmake -DCMAKE_INSTALL_PREFIX=/home/dirk/task-2.0.0.beta3 .  
$ make  
$ make install # without "sudo"
```

It makes sense to define the following three variables for the next steps.
(The first one is not needed, I use it only for this topic to fit on one slide).

```
$ taskdir=/home/dirk/task-2.0.0.beta3  
$ export PATH=${taskdir}/bin:${PATH}  
$ export LD_LIBRARY_PATH=${taskdir}/lib:${LD_LIBRARY_PATH}  
$ export MANPATH=${taskdir}/man:${MANPATH}
```

Test of your installation

```
$ task version
```

```
A configuration file could not be found in /home/user
```

```
Would you like a sample /home/user/.taskrc created, so taskwarrior can proceed? (y/n) y
```

```
task 2.0.0.beta3 built for linux
```

```
Copyright (C) 2006 – 2011 P. Beckingham, F. Hernandez.
```

```
Taskwarrior may be copied only under the terms of the GNU General Public License, which may be found in the taskwarrior source kit.
```

```
Documentation for taskwarrior can be found using 'man task', 'man taskrc', 'man task-tutorial', 'man task-color', 'man task-sync', 'man task-faq' or at http://taskwarrior.org
```

Remove Taskwarrior

Package manager

```
$ apt-get purge task
```

Sources

```
$ make uninstall
```

Commands so far

- ▶ **task add**
Adds a new task to the task list.
- ▶ **task list**
Provides a standard listing of tasks.
- ▶ **task start**
Marks the specified tasks as started.
- ▶ **task stop**
Removes the start time from the specified task.
- ▶ **task done**
Marks the specified task as done.

That's it!

```
$ task 1 annotate Try the blue one first
Annotated 1 with 'Try the blue one first'.

$ task list

ID Project Pri Started Due Recur Age Tags Description
3 gtd 8/26/2010 weekly 4wk Review task list
2 software High 5wk www Visit http://taskwarrior.org
1 software 8/17/2010 3wk Try out the color themes
9/12/2010 Try the blue one first
4 software 4wk Try out latest Firefox beta

4 tasks

$ task list due.before:now

ID Project Pri Started Due Recur Age Tags Description
3 gtd 8/26/2010 weekly 4wk Review task list

1 task

$ task 2 done
Completed 2 'Visit http://taskwarrior.org'.
Project 'software' is 33% complete (2 of 3 tasks remaining).
Marked 1 task as done.
You have higher priority tasks.
```

Thanks for your attention!

dirk@deimeke.net

<http://taskwarrior.org/>

Just kidding ...

There is a lot more to explore.

Even the commands from the last section are more mighty than they seem.

- ▶ **task add <mods>**
- ▶ **task <filter> list**
- ▶ **task <filter> start <mods>**
- ▶ **task <filter> stop <mods>**
- ▶ **task <filter> done <mods>**

To get an overview, take a look at the [cheat sheet](#) (pdf, 145kB).

task <filter> command <mods>

- ▶ Is the basic usage of all task related write commands.
- ▶ Write commands can operate on one task or a group of tasks or even on all tasks.
- ▶ Every command maybe abbreviated up to the minimum that is necessary to identify a single command.
- ▶ Filters can be anything from nothing to simple IDs further to regular expressions or Boolean constructs.
- ▶ Modifications can be either a change of description, a change of dates or anything else that changes a task.
- ▶ In our simple example we already used the write commands **add**, **done**, **start** and **stop**.

Scripts

```
Taskwarrior
$ ls $PWD/*
/usr/local/share/doc/task/scripts/add-ons:
export-csv.pl  export-xml.pl  export-yad.pl      import-yaml.pl
export-html.pl export-xml.py  export-yaml.pl     update-holidays.pl
export-ical.pl export-xml.rb  import-todo.sh.pl

/usr/local/share/doc/task/scripts/bash:
task_completion.sh

/usr/local/share/doc/task/scripts/extensions:
command.lua  dom.lua  format.lua  program_hook.lua  task_hook.lua  uda.lua

/usr/local/share/doc/task/scripts/fish:
task.fish

/usr/local/share/doc/task/scripts/vim:
ftdetect  README  syntax

/usr/local/share/doc/task/scripts/zsh:
_task
$ . /usr/local/share/doc/task/scripts/bash/task_completion.sh
$ cp -r /usr/local/share/doc/task/scripts/vim ~/.vim
$ █
```

Most important commands

These are the most important commands, just because I use them most ;-)

- ▶ **task <filter> modify**

The name says it, it modifies tasks according to the filter used.

- ▶ **task <filter> edit**

This starts your favourite editor with the tasks you want to change.
(Remember the syntax highlighting for vim?)

- ▶ **task undo**

Reverts the most recent change to a task.

- ▶ **task help**

Gives an overview of implemented commands and custom reports.

- ▶ **man task (taskrc, task-tutorial, task-color, task-faq, task-synch)**

Show the (almighty) man-page(s). Unlike the man-pages of many other programs they are extremely helpful and full of information and examples. Try them!

Dateformats – from 'man taskrc'

```

m minimal-digit month,      for example 1 or 12
d minimal-digit day,       for example 1 or 30
y two-digit year,         for example 09
D two-digit day,          for example 01 or 30
M two-digit month,        for example 01 or 12
Y four-digit year,        for example 2009
a short name of weekday,   for example Mon or Wed
A long name of weekday,   for example Monday or Wednesday
b short name of month,    for example Jan or Aug
B long name of month,     for example January or August
V weeknumber,            for example 03 or 37
H two-digit hour,         for example 03 or 11
N two-digit minutes,      for example 05 or 42
S two-digit seconds,      for example 07 or 47

```

The string may also contain other characters to act as spacers, or formatting. Examples for other values of dateformat:

```

d/m/Y would use for input and output 24/7/2009
yMD    would use for input and output 090724
M-D-Y  would use for input and output 07-24-2009

```

Examples for other values of dateformat.report:

```

a D b Y (V) would do an output as "Fri 24 Jul 2009 (30)"
A, B D, Y   would do an output as "Friday, July 24, 2009"
vV a Y-M-D  would do an output as "v30 Fri 2009-07-24"
yMD.HN      would do an output as "110124.2342"
m/d/Y H:N   would do an output as "1/24/2011 10:42"
a D b Y H:N:S would do and output as "Mon 24 Jan 2011 11:19:42"

```

Set dateformat

```
Taskwarrior
$ task show dateformat

Config Variable      Value
dateformat           m/d/Y
dateformat.annotation m/d/Y
dateformat.holiday   YMD
dateformat.report     m/d/Y

Some of your .taskrc variables differ from the default values. These are highlighted in color above.
$ task config dateformat YMD
Are you sure you want to add 'dateformat' with a value of 'YMD'? (y/n) y
Config file /home/user/.taskrc modified.
$ task config dateformat.annotation YMD
Are you sure you want to add 'dateformat.annotation' with a value of 'YMD'? (y/n) y
Config file /home/user/.taskrc modified.
$ task config dateformat.report YMD
Are you sure you want to add 'dateformat.report' with a value of 'YMD'? (y/n) y
Config file /home/user/.taskrc modified.
$ # my dateformat is YMD-HN
$
```

Set weekstart

```
$ task show weekstart
```

<u>Config</u>	<u>Variable</u>	<u>Value</u>
weekstart		Sunday

Some of your .taskrc variables differ from the default values. These are highlighted in **color** above.

```
$ task config weekstart Monday
```

Are you sure you want to add 'weekstart' with a value of 'Monday'? (y/n) y

Config file /home/user/.taskrc modified.

```
$ task show | wc -l # nearly everything can be customized
225
```

```
$ # try it yourself without '| wc -l'
```

```
$ █
```

Special dates (1)

Holiday

Attention!

Holiday has nothing in common with the German words “Ferien” or “Urlaub” (this would be vacation). (Public) Holiday means “Feiertag”.

You can add holidays by either adding them via “task config” on the commandline or by adding them directly to the `/.taskrc`-File or by including an external holiday definition.

On holidata.net you find a growing list of holiday dates, licensed CC-BY and offered by volunteers. Service was introduced by the Taskwarrior team, who is responsible for hosting and conversion to different formats.

Add holiday

```
Taskwarrior
$ task config holiday.carnivalstart.name Carnival Start
Are you sure you want to add 'holiday.carnivalstart.name' with a value of 'Carnival Start'? (y/n) y
Config file /home/user/.taskrc modified.
$ task config holiday.carnivalstart.date 20111111
Are you sure you want to add 'holiday.carnivalstart.date' with a value of '20111111'? (y/n) y
Config file /home/user/.taskrc modified.
$ task cal
```

Predefined reports (from task reports), part 2

These reports were already used.

- ▶ **blocked** Lists all blocked tasks matching the specified criteria
- ▶ **list** Lists all tasks matching the specified criteria
- ▶ **long** Lists all task, all data, matching the specified criteria
- ▶ **projects** Shows a list of all project names used, and how many tasks are in each
- ▶ **recurring** Lists recurring tasks matching the specified criteria
- ▶ **unblocked** Lists all unblocked tasks matching the specified criteria
- ▶ **waiting** Lists all waiting tasks matching the specified criteria

Predefined reports (from task reports), part 2

New ones:

- ▶ **active** Lists active tasks matching the specified criteria
- ▶ **all** Lists all tasks matching the specified criteria, including parents of recurring tasks
- ▶ **burndown.daily** Shows a graphical burndown chart, by day
- ▶ **burndown.monthly** Shows a graphical burndown chart, by month
- ▶ **burndown.weekly** Shows a graphical burndown chart, by week
- ▶ **completed** Lists completed tasks matching the specified criteria
- ▶ **ghistory.annual** Shows a graphical report of task history, by year
- ▶ **ghistory.monthly** Shows a graphical report of task history, by month
- ▶ **history.annual** Shows a report of task history, by year
- ▶ **history.monthly** Shows a report of task history, by month
- ▶ **information** Shows all data and metadata for specified tasks
- ▶ **ls** Minimal listing of all tasks matching the specified criteria
- ▶ **minimal** A really minimal listing

Predefined reports (from task reports), part 3

And more:

- ▶ **newest** Shows the newest tasks
- ▶ **next** Lists the most urgent tasks
- ▶ **oldest** Shows the oldest tasks
- ▶ **overdue** Lists overdue tasks matching the specified criteria
- ▶ **summary** Shows a report of task status by project
- ▶ **tags** Shows a list of all tags used

Filtering in general

You can filter for any modifier. If you don't use a modifier description is searched for the term, which may be a regular expression, on the command line. Filters may be combined.

The following attribute modifiers maybe applied as well. Names in brackets can be used alternatively.

So a filter can look like "attribute.modifier:value".

- ▶ before, after
- ▶ none, any
- ▶ is (equals), isnt (not)
- ▶ has (contains), hasnt
- ▶ startswith (left), endswith (right)
- ▶ word, noword

Support

taskwarrior.org

The screenshot shows the taskwarrior.org website. The header includes navigation links like Home, My page, Administration, and a search bar. The main content area is divided into several sections: a description of Taskwarrior as a command-line todo list manager, a Tip section, Latest news, Project team, Support, and Sponsorship. A table of recent tasks is also visible.

Taskwarrior
Overview Activity Download External Scripts Forums Issues New issue News Roadmap Support Wiki Settings

Taskwarrior is a command-line todo list manager.
It maintains a list of tasks that you want to do, allowing you to add/remove, and otherwise manipulate them. Task has a rich list of subcommands that allow you to do sophisticated things with it. You'll find it has customizable reports, charts, GTD features, Lua extensions, device syncing, and more.
Taskwarrior is a very active project involving people around the globe - check often for updates.
Latest beta release: 2.0.0.beta3 (Released: 2011-10-03)
Download **task 2.0.0.beta3**
(See the Roadmap and 2.0 Changes for details on the release).
Command reference latest beta release:
task-2.0.0.ref.pdf.
Latest stable release: 1.9.4 (Released: 2011-03-03)
Download **task 1.9.4** (current stable version)
(Instructions on how to download and install task: on Fedora, Ubuntu and other Linux versions, Mac OS X or Cygwin via the corresponding package can be found on the Download page). Most major platforms are supported.

Project	Due	Assign	Age	Description
1. task	8/26/2010	weekly	44	Review task list
2. task	8/26/2010	weekly	44	Review task list
3. task	8/26/2010	weekly	44	Review task list
4. task	8/26/2010	weekly	44	Review task list
5. task	8/26/2010	weekly	44	Review task list

Tip
